SUMMARY

Software Engineer with 3.8+ years of experience building production web and mobile applications, scalable backend systems, and developer tools. Experienced in owning features end-to-end—from architecture and implementation to testing and deployment—with a strong focus on performance optimization, reusable system design, and developer experience. Built AI-powered products, open-source tools, and multi-tenant SaaS applications used in production.

SKILLS

Languages: JavaScript, TypeScript, Python, HTML5, CSS3

Frontend: React.js, Next.js, React Native, Expo, Redux Toolkit, TanStack Query, Tailwind CSS

Backend: Node.js, NestJS, Express.js, GraphQL, Prisma

Databases: MongoDB, MySQL, PostgreSQL (basic)

DevOps: AWS (EC2, S3), Docker, GitHub Actions (CI/CD), Git

Concepts: System Design, API Design, Authentication & Authorization (JWT/RBAC), Performance Optimization, Testing, Agile/Scrum

EXPERIENCE

Software Engineer | Feb 2024 – Mar 2026

[REAL \(NASDAQ: REAX\)](#)

- Redesigned the agent onboarding flow across web and mobile applications, increasing onboarding completion by 40%..
- Built production chat and voice experiences for LEO AI by integrating REST and streaming APIs, enabling real-time AI-assisted workflows for real estate agents
- Designed and maintained a shared React/TypeScript component library of 100+ reusable components adopted across web and mobile.
- Converted 50+ Figma designs into responsive, production-ready interfaces while maintaining consistency across platforms.
- Achieved 95% test coverage across critical user journeys using Playwright, Jest, Vitest, and Detox..
- Reduced page load time from ~5.0s to 1.78s (64%) through route-level code splitting, lazy loading, rendering optimizations, and API request deduplication

Founder & Software Engineer | Apr 2023 – Jan 2024

[WayVerb \(Self-Founded SaaS\)](#)

- Built and launched a multi-tenant school management SaaS platform using React, Next.js, NestJS, MongoDB, and MySQL, supporting administrators, teachers, students, and parents across 3 schools and ~2,000 users.
- Designed secure authentication and authorization using JWT, refresh token rotation, and role-based access control (RBAC).
- Managed production infrastructure independently using Docker, GitHub Actions, AWS EC2, and S3, building automated deployment pipelines and maintaining production reliability.
- Worked directly with school administrators to gather requirements, validate product ideas, and translate operational workflows into shipped features.

Software Engineer Intern | Jul 2022 – Mar 2023

[Mindnerves Technologies](#)

- Built and shipped React Native and Next.js features on a production job tracking platform, reduced redundant API calls by ~25% through cache-first data fetching and request deduplication, improving responsiveness for thousands of active users.
- Developed reusable UI components and integrated backend APIs for a digital monetization platform (Publir).

PROJECTS

mimi.js: Open-source TypeScript-first Node.js framework, routing, middleware, request parsing, Swagger generation [github](#)

- Built an open-source Node.js framework from scratch featuring a custom radix trie router, middleware pipeline, request parsing, and automatic Swagger generation.
- Removed the Express dependency in v2, achieving ~89k requests/sec (~4× Express), published to npm..

Echo: LLM-powered transcription, OpenAI + Groq API, Node.js/Electron backend, real-time React UI [github](#)

- Built a desktop application using Electron, React, and Node.js that streams speech transcription in real time using OpenAI and Groq APIs.
- Designed an asynchronous audio processing pipeline with streaming responses, delivering sub-second latency from speech input to UI updates.

FocusLoop: TypeScript, Chrome Extension APIs [github](#)

- Built a Chrome extension with Pomodoro timers, website time tracking, and a custom SVG activity heatmap, using browser APIs directly.

EDUCATION

B.Tech, Computer Science Engineering 2019 – 2023

Arya College of Engineering and Research Center, Jaipur
