

MAYANK THAKUR

Software Engineer

Jaipur, Rajasthan • +91 9119209907 • heymayank2001@gmail.com • github.com/iammayank18 • linkedin.com/in/iammayank18

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript

Frontend: React.js, React Native, Redux, TanStack Query, HTML5, CSS3, Tailwind CSS, Mantine, WCAG/ARIA

Backend: Node.js, Express.js, NestJS, MongoDB, REST API design, JWT authentication, RBAC

Practices: Low-level design (LLD), OOP, design patterns, separation of concerns, API contract design, code review

Testing: Jest, React Testing Library, Vitest, Playwright

Cloud & DevOps: AWS (EC2, S3, Lambda), GitHub Actions, CI/CD, Docker, Datadog

AI Tools: GitHub Copilot, Claude Code, OpenAI Codex, Cursor, LLM-assisted debugging and testing

EXPERIENCE

Software Engineer

Feb 2024 – Mar 2026

[REAL](#)

- Owned the digital signature platform across web (React.js/Next.js) and mobile (React Native), designing component architecture, state management, and API integrations from requirements through production delivery.
- Designed a shared React.js + React Native component library in TypeScript — single source of truth for UI patterns across web and mobile teams, with composable APIs and WCAG/ARIA compliance.
- Optimized the Bolt CRM Real Estate platform by identifying a 35% performance regression and resolving bundle size and Redux hydration bottlenecks through code splitting, lazy loading, and deferred initialization.
- Improved React Native application performance using React DevTools and Flipper, validating fixes and monitoring production stability with Datadog.
- Defined API contracts with backend teams, aligning request/response schemas, validation rules, and error handling before implementation to reduce integration defects.
- Maintained 85% test coverage across critical workflows and reviewed pull requests to enforce type safety, predictable state management, and clean component boundaries.

Founder & Software Engineer

Apr 2023 – Jan 2024

[Wayverb](#)

- Built a school management SaaS using React.js, React Native, Node.js, NestJS, and MongoDB, supporting administrators, teachers, parents, and students through a shared backend architecture.
- Architected a single API layer consumed by web and mobile applications, eliminating duplicated business logic and simplifying feature development.
- Implemented JWT authentication, refresh-token rotation, and RBAC across multiple user roles, enforcing authorization consistently at both API and UI layers.
- Revised the database schema twice after conducting customer discovery with schools, aligning the product data model with real operational workflows.
- Managed AWS infrastructure, Docker deployments, GitHub Actions CI/CD pipelines, and production debugging independently.

Software Engineer Intern

Jul 2022 – Mar 2023

[Mindnerves Technologies](#)

- Built and shipped React Native features for a real-time job tracking platform used by thousands of active users.
- Reduced redundant API requests by ~25% by migrating data fetching to TanStack Query and implementing cache-first patterns with request deduplication.
- Collaborated through code reviews, QA cycles, and automated CI pipelines to deliver production-ready functionality.

PROJECTS

mimi.js — Open-Source Node.js Framework github.com/iammayank18/mimi

- Built and published an open-source Node.js framework — implements routing, middleware, request parsing, and Swagger doc generation using OOP design patterns; composable, extensible, near-zero configuration.

FocusLoop — Chrome Extension github.com/iammayank18/focusloop

- Built a Chrome extension with a custom SVG heatmap renderer, implementing efficient time-bucket aggregation and incremental updates for large activity datasets.

EDUCATION

Bachelor of Technology, Computer Science Engineering

2019 – 2023

Arya College of Engineering and Research Center, Jaipur

Coursework: Data Structures & Algorithms, OOP, Operating Systems, DBMS, Computer Networks
